Program Learning Outcomes

1. Collaborate with patients and families to assist patients in meeting their health needs (Maslow), while demonstrating an understanding of the patients' developmental levels (Erickson) and basic needs.

2. Communicate therapeutically with patients and families.
3. Identify patient and family teaching plans to maintain and promote health.
4. Identify the importance of being a patient advocate while recognizing human dignity and cultural diversity.
5. Apply the nursing process in providing safe, physical and psychosocial care for patients and families.
6. Demonstrate basic management skills in providing nursing care for patients and families (e.g. time management, organizational skills, knowledge of role of nurse and other health team members).
7. Describe technology in implementing safe nursing practice.
8. Discuss accepted nursing standards of practice and professional ethics.
9. Identify the importance of professional activities and role of the nurse.
